

Our New Denver Colorado Staff!

Angie Hardley, Technical Manager

We are excited to have Angie join the staff of Aerobiology again after a four year break. Previously, Angie was a microbiologist at our Atlanta, Georgia laboratory location. She will serve as the Technical Manager for the EMLAP program in addition supporting the PLM laboratory. Angie's graduated from Colorado State University with emphasis in microbiology. Her expertise in AIHA accreditation requirements, quality control, mycology and bacteriology in addition to her experience in the IAQ industry will support our client's analytical needs and our laboratory accreditation programs.

Roy O'Neal, Jr, Quality Manager

We are also excited to have Roy join the staff of Aerobiology after a four year break. Previously, Roy was a microbiologist at our Raleigh, North Carolina laboratory location. Roy will serve as the Quality Manager for the EMLAP and the NVLAP PLM programs. Roy is a graduate of Concord College in Athens West Virginia, with a BS in Biology minor in physical sciences. Roy has several years experience in environmental bacteriology and mycology. He is also a PAAA (Pan American Aerobiology Association) certified spore trap analyst. His knowledge of statistics, ISO 17025, environmental microbiology and indoor air quality methodologies will provide thorough QA/QC for the Denver location.

Andrea Robarge, Staff Mycologist/Analyst

Andrea joins Aerobiology with extensive experience in bacterial and fungal analytical methods, IAQ products, account management and support in addition to project management of analytical data and report interpretation. Andrea is a graduate of University of Wisconsin, BS in Biology, with an emphasis in Microbiology and has several years experience in both microbiology and chemistry laboratories. Andrea will also support accreditation efforts in EMLAP and NVLAP through her past experience with A2LA, AIHA's LQAP and ISO 17025.

Ronnie Keneson, Technical Supervisor, PLM Bulk Asbestos

Ronnie has been in the asbestos/industrial hygiene field since 1987. I began my career with Health and Safety Management in Port Arthur, Texas. My first assignment was a bulk sample survey in a refinery and eventually moved into a consultant position. After this I moved into the lab. I worked as an industrial hygiene analyst for HIH Laboratories in Webster, Texas for seven years. This included asbestos analysis as well as metals analysis by ICP. After this I relocated to Arizona and worked for AESL laboratory as a lab manager for five years. In this capacity, I managed the asbestos lab and analyzed PLM/PCM samples. I have worked in the field as a consultant overseeing asbestos abatement jobs, as well as conducting asbestos surveys. As an Asbestos Technical Supervisor, my field background can help in identifying bulk samples for asbestos identification. Our QA department will use NVLAP and AIHA as a guideline, but Aerobiology will also include in-house QA/QC as well as round robin samples to give our client the best data and results.
